

Weekly Bee Action Report — 2026-05-18

Window: 2026-05-11 → 2026-05-18 CT

Executive Summary

The week's clearest pattern is context-switching overload: family stress, Amanda Claire support, Franklin summer logistics, church venue setup, sermon publishing, and HEAL/GIMPOP AI work all generated small open loops. The useful response is not another long transcript appendix; it is a short action packet that turns recurring situations into checklists, scripts, and approval queues.

Top Pain Points

- Amanda Claire needs careful support around health, psychiatric logistics, work stress, and emotional safety.
- Household and kids logistics are creating friction because many small tasks are scattered across conversations.
- Church AV/setup and sermon publishing are becoming repeatable operational workflows but still live too much in Chris's head.
- Work opportunities around HEAL and GIMPOP AI need lightweight structure before deadlines tighten.

Top 3 Actions This Week

1. Use the Amanda support script and ask what kind of help she wants: logistics, co-working the call, or kid coverage.
2. Complete Franklin summer/VBS coverage decisions and fill the summer matrix.
3. Turn church AV and sermon publishing into checklists before the next Sunday pressure point.

Family / Home / Relationship Action Plan

Amanda Claire Support

- Use this script: “Do you want me to handle logistics, sit with you while you call, or just cover the kids so you can handle it?”
- Prepare one appointment note with current meds, side effects/rash, mood changes, sleep, and top questions.
- Do not take over unless Amanda Claire explicitly wants that.

Marriage Repair

- Weekly 10-minute check-in:
 4. What felt heavy?
 5. What helped?
 6. What is one concrete ask for this week?
- Repair phrase: “I see how that landed. I was trying to handle logistics, but the impact was that you felt talked down to. I’m sorry.”

Franklin / Summer

- Build the summer matrix by week.
- Confirm VBS/camp registration status.
- Use a short morning checklist: clothes, breakfast, teeth, shoes, backpack, water bottle.

Home Reset

- Safety first: garage gasoline smell, May-safe floor sweep, dryer vent airflow if still questionable.
- 15-minute queue: grill, jackets from backpack/hamper, Franklin water bottle, diapers/trash bags/cat food/Italian seasoning.

Work / Church / Project Action Plan

Church Venue / AV

- Ask Brandon for the venue sound contact, earliest access time, and whether gear can stay stored onsite.
- Use a walkthrough checklist: load-in path, power, stage layout, house sound, speaker placement, storage, teardown deadline, classroom signage.

Sermon Workflow

- Keep the USB-to-live runbook: import audio, extract sermon, review trim, normalize/export MP3, verify duration, prepare metadata, upload/publish only after approval, verify final URL.

HEAL / GIMPOP AI

- Draft a one-page GIMPOP AI follow-up: training, AI Tapas/forum, sandbox/infrastructure, governance, micro-prototypes.
- For HEAL, confirm content deadline, launch date, comms turnaround, sender/byline rules, and repository template.

Chris Must Decide or Do

- Whether to take direct action on Amanda medical logistics or only provide coverage.
- Franklin VBS/camp registration.
- Whether to send Cindy/Aubrey/Brandon texts.
- Church AV ownership and volunteer recruiting.
- Sermon publish approval rules.

Assistant Can Do Next Without External Side Effects

- Draft texts and checklists.
- Prepare printable summer matrix.
- Prepare church AV walkthrough sheet.
- Keep the sermon runbook updated.
- Prepare HEAL/GIMPOP follow-up docs.

Approval Needed

- Sending texts or emails.
- Calendar changes.
- Registrations involving child information or payment.
- Contacting providers, church staff, school, or family.
- Publishing sermon audio.

Blockers / Caveats

- Bee speaker labels can be imperfect, so recommendations should be treated as pattern detection, not transcript-grade certainty.
- The report is intentionally actionable-only; raw transcripts remain local for audit.
